

PREASSEMBLED LIGHT RAIL TURNOUTS

Preassembled turnout with steel ties offer numerous benefits. These units are built by skilled professionals in a controlled shop environment, ensuring consistent quality and precision. The rail is firmly and accurately fastened to maintain the correct gage on steel ties. This results in a higher-quality, longer-lasting turnout while reducing the need for costly on-site labor.

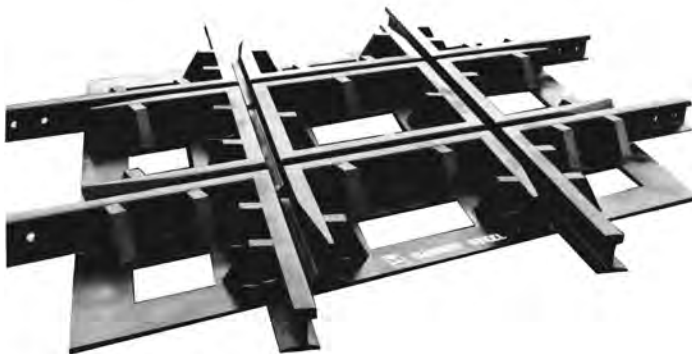

Below are examples of preassembled turnouts. They can be manufactured from entirely new rail, fully relay rail, or a combination of both. For added strength and durability, they can also be mounted on a single large steel plate. Typically, preassembled turnouts are designed for rail weighing up to 90 pounds per yard. When placing an order, please specify the rail size, track gage, frog number, and whether the turnout is right-hand, left-hand, or equilateral. Riemsarail can provide detailed dimension drawings for your approval. Additionally, special crossovers, diamond crossings, and other custom trackwork configurations are available
